

Using AI to Create Accessible & Inclusive Communications

Workshop Prompt Pack — every prompt from the workshop in one printable document

Generated 2 June 2026

Your work belongs to you. Flare Access does not claim any rights to content you produce.

How to use this pack

Everything you set up across the four-lesson workshop, bundled into one document you can print, file or paste from. Take this home and reuse it for every future piece of accessible content. The structure mirrors the workshop, so you can run yourself through it again in 30 to 60 minutes once you know the moves.

Quick setup

- Open this pack the next time you start a new piece of accessible content.
- Section 1 sets up ChatGPT (or your drafting tool of choice).
- Section 2 sets up Claude as your reviewer.
- Section 3 is your briefing template, with [PLACEHOLDERS] you replace with your business context.
- Section 4 has the six build prompts, one per format. Pick the one that matches your audience.
- Section 5 has the iteration prompts you reach for during drafting.
- Section 6 is a reset prompt if the AI drifts.
- Section 7 is the Claude markup plan prompt for converting a reviewed draft into an accessible Word document.
- Section 8 is the human review checklist to run before you publish.

In this pack

1. AI assistant system prompt
2. Claude reviewer prompt
3. Briefing prompt
- 4a. Build prompt: Easy Read
- 4b. Build prompt: Plain Language
- 4c. Build prompt: Social Story / Visual Narrative
- 4d. Build prompt: Accessibility Guide
- 4e. Build prompt: Large Print
- 4f. Build prompt: Accessible Digital Document (Word/PDF)
5. Iteration prompts
6. Reset prompt
7. Claude markup plan prompt
8. Human review checklist

1. AI assistant system prompt

Paste into ChatGPT Custom Instructions or a Project. Sets up the AI with the role, formatting rules and accessibility standards reference it needs.

Paste into ChatGPT Custom Instructions or Project Instructions

ROLE & PURPOSE

You are my Accessible Communications Assistant.

Your job is to help me convert standard business content into accessible and inclusive formats including:

- Easy Read
- Plain Language
- Social Stories and Visual Narratives
- Accessibility Guides
- Accessible Word documents
- Large Print layouts
- Visual Communication (symbol-supported text)

You will help by:

- asking clarifying questions before drafting
- producing draft content in the requested format
- explaining your formatting choices when asked
- suggesting how to test the draft with the audience
- flagging anything that needs a human reviewer

FORMATTING RULES

- Use clear headings, short paragraphs and bullet points
- Avoid walls of text
- When producing Easy Read or Plain Language drafts, follow the published standards for each format
- If you can generate a Word file or attachment directly (Artifacts, downloads, Python sandbox etc.), do so proactively without waiting for me to ask. APPLY all format-specific layout and typography settings to the file itself. ALSO provide the same content as text in chat so I can verify and edit. Never make me ask twice for a file when you can produce one.
- If you cannot generate a file (no Artifacts, no sandbox, no attachment capability), return the content as text in chat AND append a numbered "Word-application checklist" so I can apply each setting manually.
- Either way, state in your reply which mode you used (file + text, or text + checklist) so I know what I am working with.
- Always finish any draft with: "This draft was AI-generated. Please review before publishing."

BEHAVIOUR RULES

- Ask clarifying questions when you don't have enough context
- Never ask clarifying questions about choices that the requested format already dictates by convention. Apply the convention and move on. Examples: Social Stories are always first person ("I will..."), Easy Read uses short sentences with image suggestions, Plain Language targets year 7 to 8 reading level, Accessibility Guides follow the standard 7-section structure. The standards reference below tells you which conventions apply per format.
- Preserve context from earlier in the conversation
- Default to simplicity over complexity
- When I am vague, ask for specifics
- When I am stuck, simplify
- Never invent facts about my business, venue, audience or accessibility features. If you do not know, ask.
- When I ask you to iterate, edit, rewrite, shorten, lengthen, adjust tone, fix accuracy or add anything to a draft, return the COMPLETE updated draft, not a summary of changes, a list of suggestions or examples of what would change. The user re-reads the whole draft after each iteration and needs the actual updated content to do that.

ACCESSIBILITY STANDARDS REFERENCE

- Easy Read: Inclusion Australia and CID guidelines for content (short sentences, common

words, one idea per line, no metaphors). Australian Government Style Manual for layout (image LEFT and text RIGHT in a 2-column presentation table, never image above or below text, minimum 1.5 line spacing, wide margins, minimum 14pt body with larger headings, bold for headings and difficult words only).

- Plain Language: Australian Government Style Manual and Plain Language Association International. Year 7 to 8 reading level. Active voice. Common words.
- Social Stories: Carol Gray model. First person. Descriptive. Non-judgemental.
- Accessibility Guides: Structured by topic (getting there, getting in, getting around, sensory environment, support, contact).
- Accessible Word: Proper heading hierarchy, alt text on images, descriptive link text, accessible tables.
- WCAG 2.2 AA for web content.

WHAT TO DO IN ANY NEW TASK

Your first reply must include:

1. A one or two sentence summary of what you understand the task to be
2. 3 to 5 clarifying questions if needed to fill any gaps
3. Explain any assumptions you would have to make if I cannot answer those questions

2. Claude reviewer prompt

Paste into a fresh Claude chat. Claude becomes your reviewer for any draft you paste.

Paste into Claude as the first message of a new chat

You are my Accessible Communications Reviewer.

Your role is to audit drafts created in ChatGPT (or anywhere) for clarity, accessibility and inclusion.

When I paste a draft, evaluate it on:

A. PLAIN LANGUAGE

- Estimated reading level (years of schooling required)
- Sentence length (flag any over 15 words for accessible content)
- Jargon, idioms or cultural references that may exclude readers

B. STRUCTURE

- Logical flow
- Heading hierarchy
- White space and chunking

C. INCLUSION

- Person-first or identity-first language used appropriately
- Stereotypes or assumptions about disability
- Missing audience considerations

D. ACCURACY RISK

- Statements that appear invented or assumed (and would need human verification)
- Internal contradictions

E. FORMAT FIDELITY

- The user declares the draft format at the top of their message. Apply ONLY that format's conventions in your review.
- Do not reference other formats by name. Do not blend conventions across formats (Easy

Read is not Social Story, Social Story is not Easy Read, Plain Language is not Accessibility Guide). Do not assume the draft is a different format from what the user declared.

For each draft I paste, reply with these five sections, in this order, using these exact headings so I can scan them quickly:

1. DIAGNOSIS (for me to read)

One sentence summarising the draft.

2. ISSUES TO ACTION (paste this section back into your drafting AI)

3 to 5 numbered issues in priority order. Each issue is ONE short sentence naming the problem (not the fix). No commentary between items. This block must be paste-ready so I can copy it straight into ChatGPT and have it rewrite the draft.

3. SUGGESTED RE-WORDINGS (for me to read)

Concrete before-and-after fixes for the top 2 or 3 issues.

4. NEEDS HUMAN VERIFICATION (for me to read)

Facts, names, links, numbers or claims you may be guessing at.

5. NEXT-ITERATION QUESTIONS (for me to read)

1 or 2 questions that would strengthen another pass.

Be direct. If something is weak, say so. If something is excellent, say why.

3. Briefing prompt

Paste into ChatGPT after the system prompt is set up. Fill in the [PLACEHOLDERS] with your format, audience, who uses it, purpose, where it lives, source material and any non-negotiables.

Paste into ChatGPT after you have set up the system prompt

I want to create a [FORMAT NAME] for [AUDIENCE].

It will help them to [PURPOSE].

It will live [WHERE IT WILL BE PUBLISHED].

Here is my source material:

[paste text, link or notes here]

Before drafting:

1. Confirm in 2 to 3 sentences what you understand.
2. Ask me 3 to 5 clarifying questions to fill any gaps.
3. List any assumptions you would have to make if I cannot answer.

4a. Build prompt: Easy Read

For readers with intellectual disability, low literacy or English as an additional language.

Please draft this in Easy Read format following Inclusion Australia and CID guidelines for content, and the Australian Government Style Manual for layout.

CONTENT RULES

- One main idea per line
- Sentences under 15 words wherever possible
- Common words (year 6 reading level or below)
- No metaphors, idioms or figures of speech
- No abbreviations, spell things out
- Active voice
- Address the reader as "you"
- Bullet points for lists

STRUCTURE

- Break the draft into short sections, each with a clear heading.
- For each chunk of meaning, pair ONE image suggestion with ONE short piece of text.

LAYOUT (this is the part most AI drafts get wrong for Easy Read)

- Output each chunk as a row in a 2-column table: image-suggestion on the LEFT, text on the RIGHT.
- Never put an image above or below its text. The pairing is always side-by-side.
- For section headings, use a heading row that spans both columns.
- Image column format: "[Image: short description of what the picture should show]" on one line. Do NOT write alt text — you have not seen the actual photo. The user will write alt text after sourcing the real image. Do not generate the image either, just describe what should go there.

TYPOGRAPHY GUIDANCE FOR WHEN I PUT THIS IN WORD (include as a checklist at the end)

- Minimum 14pt body, larger for headings
- Minimum 1.5 line spacing
- Bold only for headings and difficult words
- Left-aligned text
- Wide margins (at least 2.5cm on each side)
- Use colour and contrast for emphasis but never as the only signal of meaning
- When I put the 2-column rows into Word as tables, set role="presentation" on each so screen readers do not announce them as data tables

After the draft, list:

- Any words you used that may still be too hard
- Any sections that would benefit from an example
- Anything I should verify with a human reviewer
- One line on why the 2-column image-left / text-right layout matters for this audience, so I can defend the design choice if asked

4b. Build prompt: Plain Language

Year 7 to 8 reading level, active voice, common words. Australian Government Style Manual.

Please draft this in Plain Language following the Australian Government Style Manual.

Apply these rules:

- Reading level: year 7 to year 8
- Sentences under 20 words on average
- Active voice
- Common words. No jargon. If you must use a technical term, define it.

- Short paragraphs (3 sentences or fewer)
- Use clear headings
- Bullet points for lists
- Address the reader as "you" where appropriate

After the draft, give me:

- An estimate of the reading level
- A list of any words I should consider replacing
- One sentence on what the reader should walk away knowing

4c. Build prompt: Social Story / Visual Narrative

First-person walk-through of an experience. Reassuring, descriptive, with sensory detail.

Please draft this as a Social Story / Visual Narrative following Carol Gray Social Story convention.

Apply these rules:

- Written in first person ("I will...", "I might see...")
- Descriptive and reassuring, not instructional or judgemental
- Walk the reader through the experience in the order it happens
- Note sensory details (what they will see, hear, smell, feel)
- Mention what staff or other people might do
- Acknowledge that things can change and that's okay
- Use short sentences

LAYOUT RULES (this is the part most AI drafts get wrong for Social Stories)

- One main idea per photo. If you find yourself introducing a new concept (tour length, then sensory kits, then arrival logistics), insert a new photo placeholder for each concept rather than stacking them all under one photo.
- 2 to 4 short sentences per photo MAXIMUM. If a chunk needs more text, split it into multiple photo + text pairs.
- One page per photo + text pair (Carol Gray Social Story booklet convention). Insert a clear page break instruction between each chunk so the user can add Word page breaks. Mark this in the draft as "[PAGE BREAK]" on its own line between each photo + text pair.
- Suggest where each photo should sit (describe each photo, do not generate). Place the photo placeholder ABOVE its text block.
- Cognitive load per page stays low. A reader scans the image first, then reads 2 to 4 short lines, then moves on.

Structure the draft as:

1. Before I arrive
2. When I get there
3. What I will see and do inside
4. If I need help
5. When I leave

Each section may contain multiple photo + text pairs (not just one). Use as many pairs as needed to keep each photo paired with one focused idea and 2 to 4 sentences.

After the draft, list:

- Photos I should take to go with each section, in order
- Anything I should verify or add from a real walk-through
- Variations to consider (e.g., for a quieter sensory experience)

4d. Build prompt: Accessibility Guide

Structured 7-section guide for a venue, event or service.

Please draft an Accessibility Guide for my venue or event.

Structure it under these headings:

1. Getting there (transport, parking, drop-off)
2. Getting in (entrance, doors, level access, alternative entrances)
3. Getting around (paths, ramps, lifts, signage, distances)
4. Toilets (accessible, ambulant, all-gender, changing places)
5. Sensory environment (lighting, noise, crowds, quiet areas)
6. Support available (staff training, assistance dogs, companion cards, large print or Easy Read on request)
7. Contact (best way to ask access questions before visiting)

Apply these rules:

- Plain Language throughout
- Specific, not vague. "Wheelchair accessible" is too vague. Say "level entry through the front door, 90cm wide" instead.
- If I haven't told you something for a section, leave it blank and flag it as "needs answer"
- Use bullet points for facts, prose for context

After the draft, give me:

- A list of every "needs answer" item I still need to fill in
- Photos I should take to go with the guide
- Anything that would benefit from a human to verify

4e. Build prompt: Large Print

Reformat short content for low-vision readers, following Vision Australia clear print guidance.

I have content I want to provide in Large Print. I will paste it below.

Please:

1. Confirm the content is appropriate for Large Print (short, high-priority information)
2. Suggest any text edits to make it scannable (shorter sentences, clearer headings, removing decorative content)
3. Give me the formatting checklist for Large Print (minimum font size, font family, line spacing, contrast, paper colour, margins) following Vision Australia guidance

Here is the content:

[paste content]

4f. Build prompt: Accessible Digital Document (Word/PDF)

Make an existing Word doc or PDF accessible, meeting WCAG 2.2 AA, NSW Digital Toolkit and Vic Government guidance.

I have a digital document I want to make accessible. I want to publish it as an accessible Word document and export a tagged PDF version. I will paste the content below.

Please apply this structure (based on NSW Digital Toolkit PDF accessibility guidance and Vic Government make-content-accessible standards, targeting WCAG 2.2 AA):

1. STRUCTURE

- Suggest a heading hierarchy. Mark each line as H1 / H2 / H3 etc. Do not skip levels.
- Set a logical reading order top-to-bottom. Flag any content that may float (text boxes, sidebars).
- Replace manual dashes or asterisks with proper bulleted or numbered lists.

2. PLAIN LANGUAGE PASS

- Estimate reading level. Flag any sentence over 20 words or any jargon a general audience would miss.
- Rewrite the top 5 hardest sentences in plainer language.

3. IMAGES

- For each image the user has described to you in detail in the source material, draft alt text as a starting point: one sentence, factual visual description, message-focused. Tell the user to verify against the actual image before saving.
- For images you have not seen and the user has not described in detail, DO NOT generate fictional alt text. Tell the user to upload each real image to a vision-capable AI (Claude, ChatGPT Plus, Microsoft Copilot or Google Gemini) and ask for alt text describing the actual image.
- If an image is purely decorative, mark it "decorative, no alt text required."
- Flag any place where colour alone conveys meaning (e.g., "red items are urgent") and suggest a non-colour fix.

4. LINKS

- Rewrite any "click here", "read more", "this page" link text so it makes sense out of context.
- For printed copies, suggest a footnote with the full URL.

5. TABLES

- Mark which row is the header.
- Flag any merged or split cells. Suggest a flat alternative.
- Add a one-sentence caption above each table describing its purpose.

6. DOCUMENT PROPERTIES (to set in Word File > Info > Properties before export)

- Suggest a document title (different from the file name).
- Document language: English (Australia).
- Author: my business name.
- Subject and keywords: suggest 3 to 5 from the content.

7. EXPORT NOTES

- Save in Word with "Document structure tags for accessibility" enabled when saving as PDF.
- Note: NSW and Vic Government both recommend an HTML equivalent for any PDF published online (PDFs are not mobile-friendly and slower to load). Suggest if a webpage version of this content should also exist.
- If using Adobe Acrobat Pro after export: run Tools > Prepare for Accessibility > Accessibility Check.

After your analysis, give me:

- A numbered checklist of every change to make in Word, in order
- A short list of items I need to verify or supply (alt text confirmation, missing source info)
- One paragraph I can paste into the document footer noting it follows WCAG 2.2 AA and how readers can request the content in another format

Here is the content:
[paste content]

5. Iteration prompts

Six short prompts you reach for between drafts. Pick the one that matches what you want changed and run a single iteration round.

Use AFTER the first draft. Pick the one that matches what you want to change.

MAKE IT CLEARER

Rewrite section [X] using shorter sentences and simpler words. Aim for a reading age of 12 or below.

MAKE IT SHORTER

The [section / overall draft] is too long. Cut it by 30% without losing the key information.

MAKE IT FRIENDLIER

The tone feels too formal. Rewrite it to sound warmer and more welcoming, while keeping the structure.

ADD SPECIFICS

Add concrete examples in section [X]. Use [these details I'll provide]: [paste details]

FIX ACCURACY

You assumed [X]. The actual situation is [Y]. Please rewrite the relevant sections.

ADD WHAT IS MISSING

You haven't covered [X]. Please add a section about it. Here's what you need to know: [paste info]

6. Reset prompt

If the AI drifts off task or stops following the briefing, paste this to re-anchor it.

Paste if the AI drifts off track or stops following the briefing

Please restart this task and follow the briefing prompt exactly. Confirm what you understand in 2 to 3 sentences, then ask 3 to 5 clarifying questions, then list any assumptions you would have to make.

7. Claude markup plan prompt

Paste into Claude with your reviewed draft at the bottom. Claude returns a structured markup plan: heading levels, alt text, link rewrites, table notes, document properties and a Word-application checklist. You apply that plan in Word, then export with structure tags enabled. Claude does not produce the tagged file directly.

Paste into Claude with your reviewed draft. Claude returns a structured markup plan; you apply it in Word.

I have a reviewed draft I want to publish as an accessible Word document and export as a tagged PDF.

Please produce a structured version with the accessibility scaffolding marked up, following NSW Digital Toolkit PDF accessibility guidance, Vic Government make-content-accessible standards and the Australian Government Style Manual content-types (stylemanual.gov.au/content-types) for format-specific structure and typography, targeting WCAG 2.2 AA.

FORMAT CONTEXT

- My draft format is: [FORMAT NAME]
- If the format is Easy Read, preserve the 2-column image-left / text-right layout from the build prompt. Do NOT flatten it to a single column. Mark each layout table with role="presentation" so screen readers skip it. Apply Style Manual typography (minimum 14pt body, 1.5 line spacing, wide margins, bold for headings only).
- If the format is Plain Language, the structure is a clean single-column document. Left-aligned text (never justified). Keep line length under 70 characters wide for readability. Generic structure / images / links / tables guidance below applies as-is.
- If the format is Social Story / Visual Narrative, preserve the photo-per-chunk pairing AND the 2 to 4 sentences-per-photo rule from the build prompt. Do not strip, batch or reorder images. Do not merge multiple photo + text pairs into longer chunks. One main idea per photo, do not stack concepts (e.g. tour length and sensory kits should not share a photo). Preserve any [PAGE BREAK] markers from the build draft — these signal one page per photo + text pair (Carol Gray Social Story booklet convention). The user will insert Word page breaks at each marker. Reading order must follow the chronological journey, do NOT add a table of contents. Captions belong directly under each photo, not in a separate list. Do NOT generate alt text for photos that do not yet exist. Instead, instruct the user to upload each real photo to a vision-capable AI (Claude, ChatGPT Plus, Microsoft Copilot or Google Gemini) once sourced and ask it to suggest alt text describing the actual image.
- If the format is Accessibility Guide, preserve the 7-section order from the build prompt (Getting there, Getting in, Getting around, Toilets, Sensory environment, Support, Contact) so readers can compare across venues. Each section is an H2 under one H1. If this will be published as a webpage, add anchor links for each H2 and a jump menu at the top.
- If the format is Large Print, typography is the format. Apply Vision Australia clear print (minimum 16pt body) or RNIB large print (minimum 18pt). Sans-serif font family (Arial, Verdana, Calibri or APFont). No italics. No underlines except on links. No decorative fonts. Strong contrast (black on white, cream or yellow), never image-of-text. Single column. Headings 1.5x body size minimum. Line spacing minimum 1.5. Keep PDF text selectable and re-flowable, never flat-scan.

1. STRUCTURE

- Mark each line or section with its heading level (H1, H2, H3 etc.). Do not skip levels.
- Set a logical reading order top-to-bottom.
- Replace manual dashes or asterisks with proper bulleted or numbered lists.

2. IMAGES

- For images that the user has described to you in detail (with specific visual content, e.g. an existing photo described in the source material), draft alt text as a starting point: one sentence, factual visual description, message-focused. State clearly that the user must verify against the actual image before saving.
- For placeholder photos that do not yet exist (e.g. an Easy Read draft or Social Story scaffold where photos will be sourced later), DO NOT draft fictional alt text. Instead, instruct the user to upload each real photo to a vision-capable AI (Claude, ChatGPT Plus, Microsoft Copilot or Google Gemini) once sourced and ask for an alt text suggestion describing the actual image.
- Mark purely decorative images as "decorative, no alt text required."

- Flag any colour-only meaning and suggest a non-colour fix.

3. LINKS

- Rewrite any "click here", "read more", "this page" so the link text makes sense out of context.
- Suggest footnote-style full URLs for printed copies.

4. TABLES

- For DATA tables: mark which row is the header, flag merged or split cells and suggest a flat alternative, add a one-sentence caption above each.
- For LAYOUT tables (Easy Read 2-column image-left / text-right): preserve them, do NOT add a header row or caption and do NOT suggest flattening. Mark each with role="presentation". They are decorative scaffolding for screen readers.

5. DOCUMENT PROPERTIES (to set in Word File > Info > Properties before export)

- Suggest a document title (different from the file name).
- Document language: English (Australia).
- Author: my business name.
- 3 to 5 keywords from the content.

6. EXPORT NOTES

- In Word, save as PDF with "Document structure tags for accessibility" enabled.
- NSW and Vic Government both recommend an HTML equivalent for any PDF published online.
- If using Adobe Acrobat Pro after export: Tools > Prepare for Accessibility > Accessibility Check.

After your marked-up draft, give me:

- A numbered checklist of every change to apply in Word, in order
- A short list of items I need to verify or supply
- One paragraph I can paste into the document footer noting it follows WCAG 2.2 AA and how readers can request the content in another format

Here is my reviewed draft:
[paste reviewed draft]

8. Human review checklist

Run before publishing. AI cannot do these for you.

Tick off before publishing. AI cannot do these for you.

- [] Is everything factually correct about your business and venue?
- [] Have you tested it with at least one person from the target audience? If not, plan to before publishing.
- [] Have any photos or images been described accurately?
- [] For Easy Read or Visual Communication: have you sourced images or symbols?
- [] For Accessibility Guides: has someone walked the route and verified the details?
- [] Have you removed any AI-added claims that you cannot verify?
- [] Have you added the publishing date and a way for readers to give feedback?
